Occupational health and safety

Occupational health and safety or can be called in another way. Occupational safety, health and working environment (OHS) is a multidisciplinary concerning the safety and health of employees in the organization. Prevent employees from harm Accidents or effects from work

Globally, more than 2.78 million people die as a result of occupational accidents or occupational diseases, resulting in one death every 15 seconds and a non-fatal injury occurring every 15 seconds. Another 375 million people per year, causing such organizations to lose a lot of employees and various compensation per accident.

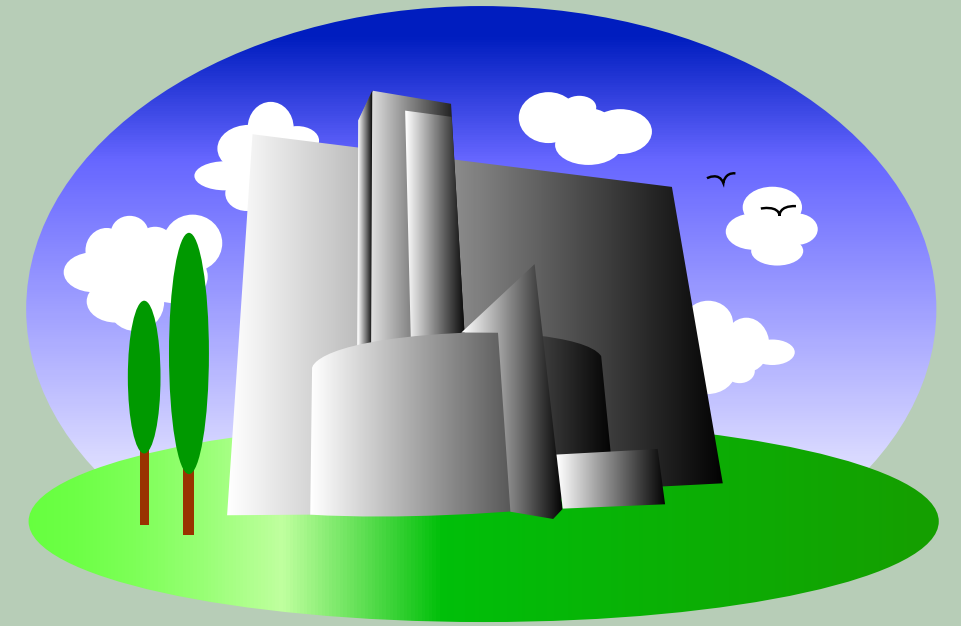

The International Labor Organization (ILO) and the World Health Organization (WHO) have jointly defined the objectives and scope of the three pillars of safety action that their organizations should provide.

1. Politeness of employees is promoted.

2. The working environment has been improved to ensure that the working area is safe.

3. There is a culture of safety in the workplace within the organization and support in all aspects related to working safely by allowing all employees to participate. There is a policy issued by the management to show the organization's safety stance. There is support in terms of safety training.

Thank you!
